Bible Characters Nonograms

Use the clues to complete the text or drawing. The numbers to the left of the column and to the top of the grid instructs you how many squares in the rows and columns must be filled. The space between the numbers on the left lets us know that there has to be at least one space between the other groups of filled squares in that row. The vertical spacing between the numbers on the top shows us that there has to be at least one space between the other groups of filled squares in that column. For example, the numbers 2,2 on the left side of the grid lets me know that there are two groups of two filled squares on that row with at least one empty square between each group of 2. Good luck!
